- To obtain an internship or entry-level position in software development where I can apply my technical skills, gain practical experience, and contribute to organizational growth.

INTERNSHIP EXPERIENCE

Intern – Upturn India Technologies

Duration: [January 2026– Present]

- Working on web development using HTML, CSS, JavaScript, and PHP.
- Gaining practical experience in real-world project development.
- Assisting in backend development and database management using MySQL.
- Implementing features like login system and user management.
- Debugging and improving application performance.
- Collaborating with team members on project tasks.

1. Online Voting System

- Developed a secure Online Voting System to conduct digital elections efficiently.
- Implemented user authentication with OTP verification and role-based access (Admin & Voter).
- Designed an Admin panel for election management, candidate approval, and result declaration.
- Ensured data security using password hashing and database validation.
- Provided real-time vote counting and result display.

2. NOC Certificate System

- Developed an Online Building Permission NOC System to digitize the application and approval process.
- Implemented multi-role workflow including Applicant, Admin, and Officer for systematic verification.
- Enabled online application submission with multiple document upload and validation.
- Automated NOC certificate generation after successful verification.

Languages Used

Frontend: HTML, CSS, JavaScript

Backend: PHP

Database: MySQL
